Yodos, Modos, and Hodos are teams in Boboball. This is a version of soccer known only to inhabitants of outer space. All three teams must play in each game. The number on each team and the total number of players can change in each game.

There are 37 players in the game. There are 3 times as many Hodos as Yodos playing. There are 5 Modos. How many players were there from each team in this game?

Be sure to:
1. Restate the question (what is the question asking?)
2. List ALL the information that you know.
3. Plan and solve the problem showing all your work (you can use equations, words, diagrams, charts, drawings…)
4. Check your work (show how you checked your answer against the question and what you knew at the beginning)
5. Answer the question in a sentence.

Hint: A strategy that we used in class was to count cubes. You can use things like buttons, macaroni, pennies as counters to help solve the problem.

Language Arts

We have been talking about point of view in class and how people see things differently than others. Look at this picture and describe your point of view about what you see. Use ROPES to formulate your answer being sure to support your opinions.
